DC Site Intelligence

NexPhase Advisory

Across all 50 US states, **Arizona** leads NexPhase's DC Site Intelligence ranking at **9.6/10**, followed by **Texas** and **Nevada**. The ranking combines interconnection queue activity at each state's substations with retail load growth.

TOP 10 STATES BY QUEUE ACTIVITY AND LOAD GROWTH

#	State	Score (1-10)
1	**Arizona**	**9.6**
2	**Texas**	**9.3**
3	**Nevada**	**8.9**
4	**Oregon**	**8.7**
5	**Georgia**	**8.4**
6	**California**	**8.1**
7	**Oklahoma**	**8.0**
8	**Florida**	**7.9**
9	**Utah**	**7.9**
10	**Wyoming**	**7.9**

The full 50-state index is available to clients.

HOW THE INDEX WORKS

What it measures. The index ranks the 50 states on three inputs, from measured public data only. Queue activity: the average interconnection queue activity at the state's substations where generation has filed to connect (megawatts requested, number of requests, share still active and voltage), a proxy for developer interest in the grid there. Queue depth: how many substations show strong or moderate queue activity. Load growth: how fast retail electricity sales have grown (historical).

What it does not measure. It does not measure transmission capacity or load-serving capacity. Queue activity shows where generation developers want to connect, not spare room on the grid; a heavily queued substation can have the least room left. Whether a utility can serve a new large load at a given site takes a utility service availability study.

How to use it. Use it to pre-screen markets before utility outreach, not as a siting recommendation. For any state, confirm large-load service timelines with the utility.

How it is scored. Each state gets a score from 1 to 10. A state with no retail sales data is scored on the other measures, so missing sales data never counts against it. Scores are recomputed when the queue data is refreshed, weekly.

This report does not replace a utility service availability confirmation. It is a pre-screening tool that shows where generation developers are active and retail load is growing, for further diligence.
