

DC Site Intelligence

NexPhase Advisory

Across 20 priority US data-center markets, **Arizona** leads NexPhase's Site Intelligence ranking at **7.2/10** on grid infrastructure depth and quality, followed by **California** and **Oregon**. 6 of the 20 markets remain underdeveloped for data centers — open runway where grid infrastructure is ahead of current build-out.

RANKED MARKETS — TOP 10

#	State	Score	Market Tier	Depth S·M	Load Growth
1	AZ Arizona	7.2	Competitive Market	8·33	+2.2%
2	CA California	7.2	Competitive Market	22·28	-2.4%
3	OR Oregon	6.7	Competitive Market	5·30	+3.4%
4	WA Washington	5.8	Underdeveloped	1·20	-1.7%
5	FL Florida	5.2	Underdeveloped	3·12	+0.9%
6	NV Nevada	5.1	Emerging	1·4	-2.8%
7	CO Colorado	4.9	Underdeveloped	1·10	-2.1%
8	GA Georgia	4.3	Competitive Market	3·15	-2.0%
9	TN Tennessee	4.3	Emerging	0·3	-2.9%
10	OH Ohio	4.2	Competitive Market	1·4	+0.9%

TOP 3 MARKETS

Arizona #1 · 7.2/10

Arizona ranks #1 at 7.2/10, carried by 8 STRONG and 33 MODERATE density substations (avg 4.95/10 across 194 queue substations). As a competitive, built-out DC market, utility load is growing (+2.2% weighted).

California #2 · 7.2/10

California ranks #2 at 7.2/10, carried by 22 STRONG and 28 MODERATE density substations (avg 5.31/10 across 131 queue substations). As a competitive, built-out DC market, load growth is soft (-2.4% weighted), so the case rests on grid capacity rather than demand momentum.

Oregon #3 · 6.7/10

Oregon ranks #3 at 6.7/10, carried by 5 STRONG and 30 MODERATE density substations (avg 4.48/10 across 213 queue substations). As a competitive, built-out DC market, utility load is growing (+3.4% weighted).

METHODOLOGY

Each market is scored 1–10 from four factors; the three continuous factors are min-max normalized across the 20 states, then weighted:

- **Avg Infrastructure Density (35%)** — mean per-substation density score across the state's interconnection-queue substations (grid *quality*).
- **Infrastructure Depth (25%)** — normalized count of STRONG + MODERATE density substations (STRONG weighted 2x) — grid *breadth*, so distributed-grid states are not penalized for lacking a single dominant hub.
- **Weighted Load Growth (25%)** — utility retail-sales YoY growth, weighted by load; non-organic reporting outliers (>100%) excluded.
- **Competitive Market (15%)** — data-center *market* competition, NOT grid: a Competitive Market is built-out with more rivals for sites/power; less-developed markets score higher. Never indicates a thin grid.

“Competitive Market” means market-competition pressure, not absence of grid — a Competitive Market can still have deep, high-quality grid.

This report is a market screening tool. It identifies power-advantaged markets for further diligence. It does not replace utility service availability confirmation.
